MEMORANDUM FOR CHIEF EXECUTIVE OFFICERS

FROM:  D. Scott Dodrill, Assistant Director
Correctional Programs Division

SUBJECT: Revised Guidance for Residential Reentry Center
(RRC) Placements

This memorandum provides guidance to staff when making inmates' pre-release Residential Reentry Center (RRC) placement decisions. Assessment and decision-making practices are to focus on RRC placement as a mechanism to reduce recidivism. Recidivism reduction results in cost efficiencies, less victimization, and safer communities.

Our RRC resources are limited and must be focused on those inmates most likely to benefit from them in terms of anticipated recidivism reduction. In other words, our decisions are to be based on an assessment of the inmate's risk of recidivism and our expectation that RRC placement will reduce that risk. Our strategy is to focus on inmates who are at higher risk of recidivating and who have established a record of programming during incarceration, so that pre-release RRC placements will be as productive and successful as possible.

As Chief Executive Officers, you play a vital role in implementing the Bureau of Prisons' (Bureau) reentry strategy, including RRC utilization. This guidance will assist you in making RRC placement decisions.

GENERAL CONCEPTS - The following general concepts apply to all RRC placement assessments and decision-making:

Eligibility vs. Appropriateness - When making RRC placement determinations, it is critical that staff understand the difference between eligibility and appropriateness. All inmates are statutorily eligible for up to 12 months pre-release RRC

placement. Nevertheless, not all inmates are appropriate for RRC placement, and for those who are appropriate, the length of the RRC placement must be determined on an individual basis in accordance with this guidance.

Individual Assessments Required - Inmates must continue to be individually assessed for their appropriateness for and the length of pre-release RRC placements using the following five factors from 18 U.S.C. § 3621(b):

- (1) The resources of the facility contemplated;
- (2) The nature and circumstances of the offense;
- (3) The history and characteristics of the prisoner;
- (4) Any statement by the court that imposed the sentence:
 - (a) concerning the purposes for which the sentence to imprisonment was determined to be warranted; or
 - (b) recommending a type of penal or correctional facility as appropriate; and
- (5) Any pertinent policy statement issued by the U.S. Sentencing Commission.

These individual assessments occur as part of the inmate classification and program review process, with the unit manager holding decision-making responsibility at the unit level. Institution- or region-specific parameters for RRC placement decision-making are prohibited.

RRC Placements of More Than Six Months - Regional Director approval of RRC placements longer than six months is no longer required.

Residential Drug Abuse Program Graduates - Inmates who successfully complete the institution-based portion of the Residential Drug Abuse Program (RDAP) will continue to be assessed for pre-release RRC placements according to the guidance in the Psychology Treatment Programs policy.

Coordination Between Institution Staff and Community Corrections Management Staff - Community Corrections Management (CCM) staff must continue to review referral documents and other pertinent information for every RRC referral. If CCM staff question the appropriateness of the referral or the length of the requested placement, they must communicate these concerns to the referring institution. Differing recommendations will be resolved at the appropriate level within the regional management structure. Under no circumstances should CCM staff unilaterally deny RRC referrals or adjust placement dates, unless these determinations can be linked directly to a lack of RRC bedspace or fiscal resources.

Medical and Mental Health Concerns - When considering RRC placement for inmates with significant medical or mental health conditions, institution staff are strongly encouraged to coordinate release planning with CCM staff and Transitional Drug Abuse Treatment staff (for mental health concerns). If an inmate's condition precludes residential placement in an RRC, and if staff can make appropriate arrangements to secure the community-based medical and/or mental health services these inmates will need, direct placement on home detention should be considered.

Inmates Who Decline RRC Placement - If an institution recommends release through a community-based program and the inmate declines, institution staff should counsel the inmate as to the benefits of a structured reentry program. However, if the inmate continues to decline this opportunity, she/he may do so without being subject to disciplinary action.

Inmates Who are Inappropriate for RRC Placement - Inmates who, during incarceration, have refused programming or failed to engage in activities that prepare them for reentry may be inappropriate for RRC placement. Similarly, inmates with recent, serious, or chronic misconduct and those who have previously failed an RRC program may be inappropriate.

RRCs provide opportunities for inmates to acquire the support systems, e.g., residence, employment, follow-up treatment, they will need to live a crime-free life, but inmates must be ready to take advantage of these opportunities. If they have clearly demonstrated through their behavior that they are not ready, RRC programming is unlikely to result in behavioral change and would be a waste of the Bureau's resources, as well as place the public at undue risk.

Professional judgment must be exercised, insofar as inmates with some misconduct, or some refusal to participate in programming, may still be appropriate for RRC placement. Staff must exercise their discretion in determining whether an inmate is ready to take advantage of the opportunities and expanded liberty that RRCs offer.

If staff decide not to refer an inmate for RRC placement, the inmate's release should be carefully coordinated with U.S. Probation or Court Services and Offender Supervision Agency (DC Code inmates).

Professional Judgment - RRC placement, in and of itself, is not a reward for good institutional behavior, nor is it an early release program or a substitute for the furlough program. RRC placement and length of placement decisions cannot be reduced solely to a classification score or any other type of arbitrary categorization. While staff assessment and analysis of tools such as the Custody Classification Form (BP-338) and the Inmate Skills Development (ISD) Plan are helpful in establishing broad-based groupings, staff must continue to exercise their professional judgment when making individual inmate RRC placement decisions and be prepared to justify those decisions.

LENGTH OF RRC PLACEMENT

General Guidelines

- **Prospective Application** - Inmates with previously established RRC transfer dates will not be reconsidered under this guidance.
- **90 Days Minimum Placement** - With the exception noted below under the heading of Lower-Risk Inmates, inmates should be considered for at least 90 days pre-release RRC placement whenever possible.
- **High-Risk Versus Low-Risk Inmates** - RRCs are most effective, in terms of recidivism reduction, for inmates at higher risk for recidivism. Consequently, appropriate higher-risk inmates should be considered for longer RRC placements than lower-risk inmates. The BP-338 measures some of the factors that predict risk. Ordinarily, the lower the BP-338 score, the lower the risk; conversely, the higher the score, the higher the risk. Therefore, low-, medium-, and high-security inmates tend to be higher risk than minimum-security inmates.

Similarly, the ISD tool identifies deficits that may contribute to recidivism. Inmates with a significant number of deficits may be at higher risk for recidivism than those with few or no deficits. When making RRC placement decisions, staff should ensure that the BP-338 and ISD Assessment have been accurately completed. While neither tool can be relied upon solely, they are helpful tools in assessing an inmate's risk level.

Lower-Risk Inmates

- **Consider Home Detention Option** - With the exception of RDAP graduates, institution staff will evaluate minimum-security inmates who have an approved release residence to determine if direct transfer from an institution to home detention is appropriate. If so, this determination will be noted in item 11 of the Institutional Referral for RRC Placement form, and the requested placement date (item 3.b.) will be the inmate's home detention eligibility date. These procedures are to be followed even if this results in a community-based placement of fewer than 90 days.
- If a minimum-security inmate is not appropriate for direct placement on home detention, staff will request an RRC placement of sufficient length to address the inmate's reentry needs.
- CCM staff are to ensure that procedures are in place for the direct placement of inmates on home detention, or after only a brief stay (14 days or less) in an RRC. At a minimum, CCM staff must monitor their minimum-security population weekly and follow up with RRC contractors to ascertain why eligible minimum-security inmates have not been referred for placement on home detention.

Higher-Risk Inmates - As previously stated, in terms of recidivism reduction, inmates at higher risk for recidivism stand to benefit most from RRC services. When considering the length of the RRC placement for higher-risk inmates, staff should consider the following:

- **History of Individual Change** - Assess whether the inmate's history of individual positive change during incarceration indicates an ability and willingness to take advantage of opportunities for positive reintegration to the community. Based on that history, staff must predict whether the inmate is likely to respond positively to the highly structured regimen of an RRC, and whether the inmate will avail her/himself of the available RRC opportunities.
- **History of Program Participation** - Assess the inmate's history of successful completion of, or participation in, available programming opportunities during incarceration, including programming which addresses the deficits identified through the ISD System. In particular, determine whether the inmate completed or made satisfactory progress toward completing a program shown to reduce recidivism, such

as any of the cognitive/behavioral treatment programs described in the Psychology Treatment Programs Program Statement, as well as academic and vocational training programs.

- **Inmate's Community Support Systems** - Assess the inmate's available community support systems, e.g., housing, employment, etc.
- **Length of RRC Placement** - Longer RRC placements should be considered for inmates whose following factors are high:
 - Risk for recidivism;
 - Demonstrated successful participation in or completion of programming opportunities; and
 - Need to establish community support systems.

Your assistance in implementing these procedures is appreciated. I look forward to working with you as we seek to effectively utilize the Bureau's limited RRC resources.
